

CloudiQS - AWS Migrations & Transfer

At CloudiQS, we have extensive experience helping businesses address migration challenges by leveraging various AWS Migration & Transfer services. Below are examples of how we solve typical customer issues

AWS Application Discovery Service:

Customer Challenge – Businesses often lack visibility into their on-premises applications, making migration planning complex.

CloudiQS Solution – We use AWS Application Discovery Service to identify dependencies and resource utilization, streamlining the migration planning process.

AWS Application Migration Service:

Customer Challenge – Manual application migrations lead to prolonged downtime and operational risks.

CloudiQS Solution – By implementing AWS Application Migration Service, we automate the migration of customer applications to AWS with minimal downtime, ensuring faster go-live and reduced manual efforts.

AWS Database Migration Service:

Customer Challenge – Migrating databases without significant downtime is a major concern for SMBs and startups.

CloudiQS Solution – We use AWS Database Migration Service to facilitate near-zero-downtime database migrations, ensuring that mission-critical applications stay online during the transition to AWS.

AWS DataSync:

Customer Challenge – Transferring large datasets from on-premises to the cloud is resource-intensive and time-consuming.

CloudiQS Solution – AWS DataSync helps us accelerate data transfers securely and efficiently, enabling businesses to transition without disrupting daily operations.

AWS Mainframe Modernization:

Customer Challenge – Modernizing legacy mainframe systems for cloud environments can be complex and costly.

CloudiQS Solution – We assist companies in migrating and modernizing their mainframe workloads using AWS Mainframe Modernization, reducing operational costs while improving system performance and scalability.

AWS Migration Hub:

Customer Challenge – Managing and tracking multiple migration projects across various environments is difficult for businesses.

CloudiQS Solution – We centralize migration activities using AWS Migration Hub, providing a single dashboard to monitor and manage all migration efforts, simplifying project tracking.

AWS Transfer Family:

Customer Challenge – Managing secure file transfers (SFTP, FTPS, FTP) to the cloud can be a daunting task.

CloudiQS Solution – We implement AWS Transfer Family to create fully managed, secure, and reliable transfer channels for businesses, simplifying the management and scalability of file transfers.
